Eclipse Aviation Delivers Three Eclipse 500 VLJs to DayJet

*New era in aviation kicks off with arrival of
first VLJs for use in commercial fleet operations*

ALBUQUERQUE, NM — March 31, 2007 — Eclipse Aviation, manufacturer of the world's first very light jet (VLJ), today announced the delivery of three Eclipse 500 aircraft to DayJet at the Eclipse headquarters in Albuquerque, New Mexico. DayJet is Eclipse Aviation's largest customer with firm orders for 239 Eclipse 500s and options for an additional 70 aircraft over the next two years. The company, which is the first commercial jet service to take delivery of a VLJ, will offer point-to-point "Per-Seat, On-Demand" services to regional communities.

"As our population and business centers become more and more dispersed, air travel is more critical than ever to the health and growth of our regional communities and businesses," said Vern Raburn, president and CEO of Eclipse Aviation. "We are proud to be playing a role in expanding the future of air transportation by delivering the Eclipse 500, the first of a new generation of VLJs that can quickly move people from point to point across our nation. It is exciting to be a partner with DayJet as they take the next step in this journey."

The aircraft delivered today will be used to train pilots at Eclipse's facilities in Albuquerque. DayJet will put its fleet of Eclipse 500s into commercial operation in the second quarter of this year.

"Today is a major milestone for DayJet, as we begin to take delivery of our Eclipse 500 jets," said Ed Iacobucci, president and CEO of DayJet. "Like many great innovations in history, there is a confluence of hardware and software advances that together, promise radical change and benefit to thousands of regional business travelers."

About Eclipse Aviation

Eclipse Aviation, manufacturer of the world's first very light jet, is in the business of designing, certifying and producing modern, affordable jet aircraft that will revolutionize the transportation market. The company is applying advanced electronics systems, manufacturing and business practices to produce aircraft that cost half that of today's small jet aircraft, will be significantly safer and easier to operate than those of today, and have the lowest cost of ownership ever achieved in a jet aircraft.

The goal of Eclipse is to bring the word "personal" into aviation, making it possible for business travelers to move directly between cities on a quick, affordable and convenient basis. It will also allow pilot owners to enter the world of jet-powered aviation. Contact Eclipse at <http://www.eclipseaviation.com>.
